

## **Researcher with experience within the health care area wanted for DEFACTUM**

In DEFACTUM, we are searching for a new colleague with a strong research profile within the health care area who would like to deliver research based knowledge of high quality supporting political/administrative decision making within the health care area.

We are looking for a researcher with an interest in applied research within the health care area and with a particular focus on assessment on health technology in a broader sense. Your primary task will be planning and facilitating projects within medical technology assessment (MTV) as well as health service research in general.

Your primary competences should be within technology assessment, and you need to have experience with creating systematic literature reviews within quantitative research. Knowledge of GRADE and other quality assessment tools is highly beneficial.

Besides research- and evaluation activities, you will also be expected to undertake teaching and coaching tasks, as well as working with the expansion of DEFACTUM's network and relations both nationally and internationally.

DEFACTUM is a regional research institution with approximately 100 employees, who are all working cross disciplinary with research and development of the social and health care sector, as well as the labor market area. DEFACTUM works both regionally, nationally and internationally.

The available position is situated in the research department Folkesundhed & Sundhedsforskning, (Public Health and healthcare research) which is an interdisciplinary department with approximately 35 employees who all focus on ensuring that our products are of a high quality and have impact. We are a department with a large variation in the combination of tasks, and as an employee you will have a great deal of influence on your own work tasks.

### **We offer**

- A workplace where we value professional development of both the employee as well as the entire team
- A dynamic workplace where we prioritize a good working environment and humor as well as having a well-working professional and social community
- A workplace where you have the opportunity of influencing your own work tasks
- Salary and employment conditions according to union agreement

### **We expect that you**

- Have knowledge of quantitative methods and research design within the health care area
- Have knowledge of MTV and experience with systematic literature reviews
- Have experience with project development and project applications
- Will be active in both national and international networks
- Are curious and take initiative to developing new tasks when you feel the need
- Thrive in interdisciplinary cooperation, are committed, network oriented and extrovert
- Actively create your own job
